Now You Can Reclaim Radiant Health & Celebrate Life Again!

RE-ENERGIZE YOUR LIFE WITH THE REVOLUTIONARY COLD LASER THERAPY THAT IS CHANGING MILLIONS OF LIVES AROUND THE WORLD

Experience Quantum Healing at its finest.
The SCALAR WAVE Laser incorporates 5 Healing Energy Technologies into an Ultra-Portable Healing Device (pg.24).

“Cold Laser Therapy (CLT) has experienced dramatic and explosive growth over the last 40 years, becoming a leading non-invasive therapy. This is a highly effective and powerful healing technology used in tens of thousands of clinical settings throughout the world.

Uniquely suited to both clinical and individual usage, handheld lasers are an essential therapeutic mainstay over a broad spectrum of treatment applications. Medical specialties including Sports Medicine, Traumatology, Orthopedics, Dental Medicine, Urology, Gynecology, Physical Therapy, Acupuncture & Veterinary Medicine have all developed highly specialized and unique protocols to utilize cold lasers’ unique applications.

Almost all professional sports organizations are now using Low Level Laser Therapy (LLLT), many of them extensively. In the US, at the professional level, every sport across the board has incorporated handheld lasers, both as a tremendously effective tool for reducing severity of injuries and greatly speeding recovery, and in a preventative and performance enhancing capacity.”

Jonathan Mather, ND
INTRODUCING: The Scalar Wave Laser (SWL)
FDA CLEARED! (Sometimes called Quantumwave Laser)

Cold Laser Therapy is revolutionizing the way individuals and practitioners approach holistic health care, pain management, rehabilitation, anti-aging, skin and wound care, organ and gland balancing, weight control, emotional issues and addiction treatment. Cold laser light therapy is at the leading edge of complimentary health care.

If you are considering investing in a cold laser, soft laser, healing laser or low level laser, but not sure which one to buy, you owe it to yourself to check out the Scalar Wave Laser. After testing dozens of different cold lasers the world over, this is my favorite hand held laser. Throughout this book you will be introduced to the What, Why, When Where, Who and How of Cold Laser Therapy. This is the inside scoop of valuable information that has been collected and compiled for you over many years of working in the industry. It will open your eyes and help you to see the light.

Professional MD Testimonial:
“I have had the opportunity to assist multiple patients with pain management, wound healing and physical recovery... This modality has been the best new technology I have had to offer my patients in the last decade. It is my hope that others will latch onto this technology and bring it forward, for it is a completely non-invasive option that provides so many physiologic advantages with no apparent side effects.”
--Jeffrey Nelson, MD, Medical Director
Burn and Wound Center at St. Mary’s Hospital in Tucson, Arizona
The Scalar Wave Laser provides a broad spectrum of features and settings unavailable in other lasers at an outstanding value.

The Scalar Wave Laser combines the most advanced digital cold laser technology with state of the art, patented scalar wave technology to address most facets of health, dis–ease, rejuvenation & addictions. Most lasers are limited to square wave–forms & analog technology. The Scalar Wave Laser is fully digital & utilizes multiple wave forms & frequencies including:

- Sine waves • Square waves • Scalar waves • Red Lasers
- Infrared Lasers • Super Violet Diodes & More

More options allows for treatment of the widest range of conditions. With this laser you get much more for less money: 180mW of power, 2.5” dia. aperture, 36 diode cluster (16 laser diodes & 20 LEDs). This is an ultra–portable, multi–wavelength, resonating cluster laser with 3 optional probes.

The Scalar Wave Laser has OTC (Over The Counter) FDA Clearance. While most lasers have limited, preset or no frequency capabilities, the SWL is fully digital with extensive frequency modulation capabilities & dozens of preset settings. The SWL is FDA indicated for relief of muscle and joint pain, arthritis, muscle spasm, relieving stiffness, promoting relaxation of muscle tissue, & temporarily increasing local blood circulation. Most other lasers have limited clearance & capabilities.

The SWL is quickly becoming the most sought–after cold laser or low level laser system in America & abroad. You can’t possibly treat all conditions with one wavelength, but with 3 wavelengths, a large 2.5” diameter cluster
of 36 diodes & 3 different probes you can treat the widest range of conditions. Also great for horses, dogs, cats and pets as shown below.

Professional MD Testimonial:
“The laser treatment speeds up cell repair & stimulates the immune, lymphatic, & vascular systems.”
-- Paul Sibert, M.D.
Chief of Neurology at Jersey Shore University Medical Center

A significant effect of Cold Laser Therapy (CLT) with the Scalar Wave Laser can be clearly seen in the following photos of an individual who received treatments. They had their blood photographed with a special high powered microscope before and after.

Anyone can accomplish these kind of results using the SWL.
Cold Laser Uses, Benefits & Validation

Following is a compilation of research & data, gathered from the daily use and study of cold lasers used world wide, which reveals the profound value of LLLT for use in countless therapeutic applications:

Low level laser therapy (LLLT) is the interchangeable name of Cold Laser Therapy (CLT). The application of laser light over injuries, lesions, burns, wounds, pain, inflammation and other disorders to stimulate healing within those tissues and cells. Lasers are best known for their ability to cut, but do not confuse Lasers for Healing, Cold Lasers or Low Level Lasers with cutting or high powered lasers! Low level lasers, under various names such as, cold laser, soft laser, biostimulating laser, photo stimulation diodes and many others, have been used for over 40 years in many countries as therapeutic energy devices to bring about favorable biological effects in both humans & animals.

“In Europe, Canada and Australia, where laser treatment is a well accepted methodology, it is being used for treatment of traumatic, inflammatory and overuse injuries, pain relief and healing of arthritic lesions, reduction of abscesses and treatment of persistent non-healing wounds such as cold-sores and ulcers.

This type of therapy has also been used to prevent or minimize keloid formation and adhesions, to reduce edema, and to reduce pain from surgical and other treatments. Healing with light and use of low level laser therapy can also encourage the formation of collagen and cartilage in damaged joints and the repair of nerves, tendons and ligaments. In addition, laser light can be used to stimulate acupuncture points in a non-invasive, pain-free manner.”

--Low Level Laser Therapy Provides New Treatment Possibilities,
Anti-Aging and Facial Rejuvenation

http://discoverlasers.com/scalar-wave-skin-care

Reduce or Eliminate Wrinkles and Acne with Ease. The Scalar Wave Laser and especially the probes are ideal skin care systems, offering superior power, performance, surface area coverage and power in the 3 optimal wavelengths determined to deliver superior results. Promotes the production of collagen and elastin, firms and tones skin, heals scars and essentially allows for a natural “face lift” without drugs, injections or surgery.

Professional Testimonial:
“I have used the Scalar Wave Laser as a virtual drug free medicine cabinet to re-grow bone in my jaw, heal my knee and rejuvenate my face, getting rid of wrinkles and reducing age spots. It's AMAZING!”
-- Joy Gardner
Author of 10 Books on Health & Wellness

Choose from 5 Fantastic Scalar Wave Laser discounted packages below, towards the end of this book, starting on page 24.
All natural, pain free and totally safe. Cold laser therapy and rejuvenation devices have been used actively in the medical, beauty and anti-aging field around the world for over 25 years. This stuff really works! Practitioners tell us that this is the best photo-facial and cold laser healing equipment they have ever used and they can't believe the prices compared to other units, which are not nearly as convenient, effective and easy to use.

Rejuvenate your body from the inside out. The Scalar Wave Laser is an ideal anti-aging, pain management and healing laser. Unique built-in settings support the rejuvenation of organs, glands, muscles, bones, tendons, ligament, meridians, & charkas by working on a cellular level to donate photonic energy, while promoting anti-inflammatory and analgesic effects. The Scalar Wave Laser gently and effectively unwinds stress, tension and old holding patterns while clearing cellular memory to support perfect healing.

Have Low Level Lasers Been Proven Effective?

Low Level Laser Therapy is being used as a successful treatment option for countless conditions of pain, inflammation, dental, burn, addiction and illness situations all over the world. Low Level Lasers have been used for over 40 years in many countries as therapeutic energy to bring about favorable biological effects in people, plants and animals. Unlike many therapies and drugs that just treat symptoms, Low Level Laser Therapy (LLLT) or Cold Laser Therapy (CLT) has the ability to actually promote and enhance healing.

LLLT is the future of medicine and is a modality that is rapidly growing in popularity throughout the world. The first cold laser received FDA clearance in the US in 2002. Since then over 30+ lasers have received some type of clearance. In the last few years Laser Therapy in North America has been steadily and exponentially increasing and the FDA has recently cleared multiple laser and LED devices for treatment of a variety of medical conditions including: carpal tunnel syndrome, cervical neck pain, shoulder pain, low back pain, joint pain, generalized muscle pain and acceleration of wound healing.

Technical light therapy is being used by Governmental agencies such as NASA for treating medical conditions in space applications. The U.S. Olympic training facilities have just released statements of endorsement for Laser Therapy for athletes. Cold lasers are used by the NBA, NFL, and NHL sports teams.
Use in Sports Medicine

The U.S. Olympic training facilities are enthusiastic supporters of Cold Laser Therapy (CLT), with over 50 US Olympic Sports teams incorporating Laser treatments into their therapy and training regimens. Cold lasers are extensively utilized by all teams in the NFL, the vast majority of NBA Teams, Major League Soccer, and the NHL. The rapidly growing use of Low Level Laser Therapy (LLLT) by trainers and team physicians in collegiate and high school level sports programs across the country is yet another indication of the medical efficacy of this highly effective treatment modality, which is proving to be not only a viable, but often a superior treatment option.

Additionally, Cold Laser Therapy (CLT) has been used among the Sport Horse and Grayhound racing communities for over 25 years. It’s been one of their best kept secrets for maintaining winning performance animals and it’s also used to rehabilitate injured horses and get them back in the game again.

Chadwick Smith, clinical professor of orthopedics and bioengineering at the University of Southern California Medical School, has mainstream medical credentials and is enthusiastic about cold lasers. "Cold lasers speed the healing process," said Smith, who uses the device in his clinical practice. "It used to take at least seven to ten days for a hamstring injury to heal. Cold laser therapy cuts it down to two to three days."

In the week preceding the 2004 Super Bowl, Boston–based registered nurse Ellen Spicuzza treated more than 10 Patriot players with cold laser therapy for tendon and muscle injuries. "A couple of days prior to the Super Bowl weekend, I treated [Patriot wide receiver] David Givens, who had a locked–up hamstring," she said.

She said that she rotated the laser over the "belly" of his hamstring muscle for about five minutes, and "The laser released it." Spicuzza, an independent nurse/physical therapist in Boston, usually treats Patriot players' injuries with medical massage. For the big game, she used low level laser therapy on the athletes' most troublesome pain spots for the first time. Before using the cold laser, Spicuzza was skeptical. "I am not into gimmicks," she remarked. "I didn't think it would help."

But she changed her mind after seeing how the laser expedited healing of some players' soreness and pain. "I don't think [the improved recoveries were] a coincidence," Spicuzza said. "It did help. I used it on a flared–up sciatic nerve, and the player had relief soon after treatment."
The growing acceptance of Low Laser Light Therapy (LLLT) in mainstream medicine is yet another indication of the medical efficacy of this highly effective treatment modality, which is proving to be not only a viable, but often a superior treatment option.

Are Low Level Lasers Safe?

The answer is a resounding YES. When Low Level Lasers are used correctly, they are very safe. The most important safety regulation is to avoid pointing a laser at the eye. Stimulating lasers have a particularly powerful beam and can cause harm to the retina with prolonged exposure. The infrared spectrum is invisible to the eye; consequently it does not initiate an eye reflex response. Do not point lasers directly at an open eye, or over an active cancer or at a fetus during pregnancy. Low Level Laser Therapy has been proven completely safe in over 3500 worldwide studies.

Place your order today.
Call 1-808-870-0348
Medical Conditions that Benefit from Cold Laser Therapy (CLT) Include:

- **PAIN** - Low Level Laser Therapy has been cleared by the FDA as an adjunct treatment method for pain related to neck and shoulder injuries.

- **Carpal Tunnel Syndrome** - Low Level Laser Therapy has been cleared by the FDA as an adjunct treatment method for this condition.

- **Epicondylitis (Tennis Elbow)** - Simunovic treated 324 patients... complete pain relief and restored functional ability were achieved in 82% of the acute patients and 66% of the chronic cases. J Clin Laser Med & Surg. 1998; 16 (3): 145–151

- **Low Back Pain** - Soriano performed a double-blind trial with elderly people suffering from chronic low back pain. Treatment was effective in 71% of the laser group and 36% of the sham group. The pain disappeared completely in 45% of the laser group and 15% of the sham group. Lasers Surg Med. 1998 Suppl 10, p. 6

- **Rheumatism/Osteoarthritis** - Palmgren conducted a controlled double-blind study on 35 patients with rheumatoid arthritis of the hand. In the experimental group, grip strength and movement were improved while swelling, pain and morning stiffness were reduced. Lasers in Medical Science, 1989; 4: 193.

- **Wound Healing** - Palmgren investigated the effect of Low Level Laser Therapy on infected abdominal wounds after surgery. Healing time to half wound size was 6.8 days in the laser group compared to 14 days in the placebo group. Lasers Surg Med 1991; Suppl 3:11

- **Acupuncture** - In addition, laser light can be used to stimulate acupuncture points in a non-invasive, pain-free manner. Low Level Laser Therapy Provides

• **Bacterial Infection** – In research led by Michael Hamblin of Mass. Gen. Hospital and Harvard Medical School, mice with surgically induced wounds were dosed with bioluminescent bacteria to create potentially lethal infections. Utilizing a 665 nm laser diode photodynamic therapy (Low Level Laser Therapy) the researchers found that "infected wounds healed significantly faster with the PDT method. PDT shows promise as a topical antimicrobial alternative that may work even faster than antibiotics." The Journal of Infectious Diseases, June 1, 2003, PP 1717–1725.

• **Allergic Rhinitis** – Neuman & Finkelstein studied 50 patients in a double-blind randomized study. Following treatment with a 660 nm red laser, 72% of the treatment group reported improvement of symptoms as compared to 24% of the placebo group. Ann Allergy Asthma Immunol 1997;78:399–406

• **Blood Pressure** – Umeda tested the effects of a Low Level Laser on the control of blood pressure via energy administered via the medulla oblongata. The results from a group of 30 patients suffering from hypertension were positive in 80% of the patients. Laser Therapy. 1990; 2(2): 59

**How Does Low Level Laser Therapy (LLLT) also known as Cold Laser Therapy (CLT) Work?**

According to *Low Level Laser Therapy* by Jan Turner & Lars Hode (Prima Books), low level laser therapy --

• Reduces pain by causing the production of natural pain killer endorphins.

• Reduces inflammation by suppressing inflammatory enzymes that create swelling, redness, pain, and heat and enhances the release of anti-inflammatory enzymes.

• Enhances lymphatic drainage, which increases circulation and speeds healing.

• Stimulates the release of helpful healing enzymes.

• Releases tight muscles (both smooth and striated) that create chronic pain, joint problems, and decreased mobility.
• Speeds bone repair by stimulating fibroblastic and osteoblastic proliferation.

• LLLT in the correct frequency appears to be antiviral, antifungal, and antiherpetic.

• Laser irradiation of tissue cultures has shown that units of light energy (photons) are absorbed by enzymes, which react to light within the cell. Visible red light is absorbed within the mitochondria and the infrared light is absorbed at the cell membrane.

• In a mammalian cell, this results in a change in membrane permeability, increased ATP levels and increased DNA production. The photons picked up by the cell membrane result in improved membrane stability and increased activity of the ATP dependent Na/K pump. Because cell metabolism is influenced by Na/K movement across the membrane, increasing the gradient will affect the flow of ions and hence the overall metabolism of the cell.

• On a tissue level, it has been shown that irradiation by laser light results in increased collagen and epithelial production and production of new capillaries and an increase in density of the capillary bed.

• Reduction of pain and inflammation results from this treatment, as does the stimulation of nerve regeneration, muscle relaxation and atonicity (lack of muscle tone). There is also an indication that laser light therapy helps to increase the immune system response.

**FACT:** Osmosis (transfer of essential nutrients) cannot occur across the cellular membrane of a de-polarized (sick) cell. Consequently, delayed healing, chronic dis-ease, scars, fatigue, and accelerated aging is observed! LLLT reenergizes (re-polarizes) injured cell membranes and increases the mitochondria energy by 150%, which speeds and improves the healing process!

There are 75 Trillion Cells in a human body and they all need electrons to communicate with each other. Laser light delivers required electrons and photons (little energy packets) directly to the cells and enhances both their ability to communicate with each other and their ability to produce ATP (chemical energy), which they require for optimal functioning. Additionally LLLT causes the release of anti-inflammatory enzymes and the production of endorphins, which are natural pain-killers and mood elevators.
Red light aids in the production of ATP in cells, which increases cellular health and energy. The radiation (energy) in normal cells stimulates adjacent cells to divide in the normal process of regeneration and healing. Laser light stimulates abnormal tissue to activate normal intercellular radiation, thus stimulating the normal healing process to start again. The photons produced by laser light normalize tissue by activating enzymes within cells. Once activated, enzymes within a cell trigger a chemical reaction in which more enzymes are activated in a domino-type effect. Low Level Laser Therapy has no effect on normal tissue. Photons will only be absorbed by cells that need them.

--Holistic Bird Newsletter

Photobioactivation – Light is the energy of life

Photobioactivation is a term applied to a light stimulus that initiates and/or accelerates a physiological response. Other stimuli used in medicine, for example, are temperature, ultrasound, electrical power, electromagnetic fields, etc.

In 1965 the Russians discovered that a single frequency light in a laser can stimulate DNA in damaged cell tissue. It could be infrared, red, blue, or green, as long as it was single although, as you move toward the red end of the spectrum, the rate of cellular regeneration increased. A single frequency in the green range might improve kidney function by 40 times, while the red would be about 4,000 times faster. Over the years they found that infrared, red, and violet wavelengths were the fastest way to regenerate tissue. Recovery from injuries went from ten days to two days!
The Scalar Wave Laser Probes come in all three colors/wavelengths.

When the Russians used a pulsed laser light, the tissue healed rapidly. If they used a continuous beam, they found that it sedated the cell and relieved the pain. When a single frequency pulsed light hit the cell, it actually stimulated the cell to start producing more protein than it normally does, and as a result, the cell would heal. Even when they removed the light, the cell continued healing. The continuous beam had a reverse effect. It actually caused the cell membrane to relax; it killed pain, reduced inflammation and made muscle tissue relax. The Scalar Wave Laser has settings for both kinds of light.

In the mid-seventies, at the University of Chicago, researchers discovered that the average wavelength of human cell tissue is between 600 and 720 nm; 660 is the mid-point. Since red light ranges from 625 to 700 nm, this is why the red light probe is so effective for healing skin issues. And since red is the color of iron, it also explains why the red frequency absorbs better in hemoglobin.
Today, thousands of clinical evaluations and over 300 double blind studies confirm its efficacy in numerous therapeutic applications including:

- Wound healing (formation of granulation tissue, epithelization, improved trophic condition)
- Anti-inflammatory effect (enhancement of immune response)
- Analgesia (pain relieving)
- Improvement of regenerative processes

These effects can be observed in dermatology, neurology, surgery, rheumatology, traumatology, orthopedics, gynecology, urology, dental medicine and veterinary medicine etc.

Low Level Lasers that deliver under 500 milliwatts (mW) power output do not have a thermal effect. This means that they are extremely safe and provoke no adverse skin reactions or sensations during therapy. Laser Therapy is a soft and gentle, non-thermal therapy without side effects. This contrasts the use of surgical application of LASERS, which heat or burn, coagulate, vaporize and carbonize tissue with their high-energy rates (from 3 to 50 Watts).

Photochemical Effect

The laser energy is absorbed by metabolically active pigments of the mitochondria in various cutaneous and subcutaneous layers of the skin: this involves two enzymes of the oxidation chain, Cytochrome a/a3 and Flavoprotein.

When the proper wavelengths are applied and absorbed, it is supposed that the changes in the stereochemical conformation induced by an electro magnetic field leads to an increase in activity and improves the concentration of ATP by up to 200%. In addition, an increase in oxygen and glucose metabolism is observed. A significant effect of LLLT is an optimized function of the Na–K pump at the cell membrane, an increased protein synthesis (prostaglandin, enzyme) and a significantly higher rate of mitosis.
Depending on the stimulated type of cells, the following cell physiological reactions are observed:

**Regenerative Effect**
- Enhanced fibroblast formation and collagen synthesis with improved tissue strength values
- Neurovascularization of lymphatic and blood vessels as well as vasodilatation, improve microcirculation and lymphatic drainage (resorption of edema)
- Larger quantity of granulation tissue and accelerated epithelization
- Increased activity of osteoblasts promote the formation of callus
- Regulation of muscle tissue including myocardium
- Enhancement of peripheral nerve re-growth
- Prevention of central nerve degeneration and regeneration of peripheral axons after injury

**Analgesic effect**
- Measurable changes in the potential of nerve cell membranes lead to its hyper-polarization as a good analgesic mechanism
- Improved release reaction of endorphins
- Changes in transmitter concentration at the synapsis
- Accumulation of 5-OH-indoleacetic acid (serotonin metabolite)
- Relaxation of muscle induced by the neuromuscular unit (ATP increase)
- Effect on the immune system (immune modulation)
- Activation of proliferation of immune cells including macrophages
- Immune suppressive effect by reduced antigen perception of the T-lymphocytes (as in increased acceptance of a transplant)

**Optical window of the skin**
The skin is a non-homogenous tissue and yet shows in its spectral analysis an optical window with an optimal transmission capability of light between >600 nm (visible red) and <1300 nm (infrared). Wavelengths (colors) outside of this optical window are mostly being absorbed before they reach deeper layers.
Indications listed in the World Literature of Laser Therapy

Cold Laser Therapy is a regulative medical treatment modality, which is used most in medical specialties including Dermatology, Traumatology, Sports Medicine, Orthopedics, Dental Medicine, Urology, Gynecology, General Medicine, Veterinary Medicine, Physical Therapy, Natural Medicine

Anti-Inflammatory
- Enhances proliferation of immune cells (enhancement of immune response, increase of NK cell activity etc.
- Enhances lymphatic activity (drainage)
- Improves microcirculation (vasodilation)
- Reduces swelling (oedema & haematoma resorption)
- Reduces infarct zone size in heart & brain
- Reduces mucositis after irradiation & chemotherapy
- Postoperative wound healing – Herpes simplex & zoster
- Decubitus, elephantiasis
- Ulcus cruris, diabetic foot
- Postoperative lymphoedema
- Mucositis

Analgesic (pain reduction)
- Induces B-endorphin release
- Increases ATP production
- Increases the measurable potential on nerve cell membranes
- Relaxation of muscle tension and increase of pressure pain threshold
- Reduction of trigger activity (i.e. Myofacial pain and Fibromyalgia)
- Acupuncture and auricular point activation
- Tendonitis, osteoarthritis, synovitis
- Soft tissue injuries
- Fractures, overstrained injuries (Carpal Tunnel Syndrome, tennis elbow etc.)
- Frozen shoulder, tension in neck, tension headache, lumbago
- Needle replacement

Regenerative
- Stimulates the rate of mitosis in repair mechanisms (bone, epithelial and muscle tissue
- Enhances peripheral nerve regeneration after injury
- Reduces degenerative process on central nervous system
- Enhances survival of brain cells after transient ischemia
- Accelerates neo-vascularization (neo-angiogenesis)
- Reduces or eliminates scar tissue formation
The Quantum Leap: Energizing Your Future with Light

• Increases collagen synthesis (fibroblast proliferation, tensile strength and elasticity increase)
• Wound healing, bone repair
• Tissue repair
• Facial paresis
• Stroke rehabilitation
• Inner Ear problems
• Wound healing
• Wound healing, post injury
• Wound management
• Post operative

Clinical Applications of Low Level Laser Therapy

“Arthritis. The arthritides (osteo and rheumatoid forms) have been a popular target disorder for researchers in the last decade of cold laser investigations. The results of several well designed randomized clinical trials have given clinicians good reason to be encouraged with this form of treatment. Cellular research has provided some possible mechanisms of action for these positive results including laser mediated increases in cellular proliferation, enhanced collagen synthesis, conversion of fibroblasts into myofibroblasts, increased osteoelastic activity, reduced inflammatory markers, increased lymphocyte response and stimulation of the electron transport system leading to enhanced ATP production.

“These putative mechanisms help explain the impressive results that laser therapy research has had to date in the area of wound healing. With the use of larger diameter cluster emitting beams of mixed wavelengths, clinicians can efficiently treat large wounds in short periods of time. Brosseau et al conducted a systematic review of the available literature examining the relationship between low level laser and arthritis in 2000. They applied an a priori protocol according to methods recommended by the Cochrane Collaboration. Their conclusions were that low level laser therapy (LLLT) should be considered for short term relief of pain in morning stiffness in rheumatoid arthritis...

“The general consensus among clinicians using LLLT for conditions having an inflammatory component is that significant benefits can be accrued by those patients treated with cold laser. There have been some very promising clinical trials involving cold laser in both knee and cervical spine osteoarthritis as well.
“Carpal Tunnel Syndrome. Although not as studied a clinical condition as other pathologies, this landmark cold laser investigation occurred at the Flint, Michigan GM plant when Anderson et al studied the effects of cold laser on carpal tunnel syndrome (CTS). In this particular study involving 119 subjects, half received sham laser plus physical therapy while the treatment group received real laser plus physical therapy.

“The results of this randomized, controlled and double blinded study were that there was a statistically significant treatment effect shown by the real laser group, furthermore, the authors stated that low level laser therapy (strengthening, ROM etc.) improves functional measures of wrist–hand work performance and results in greater probability of return to work. “

*Practical PAIN MANAGEMENT, Sept/Oct 2004*

**COLD LASERS IN DENTISTRY**

Cold laser is highly suited for comfortable and extremely effective use in over 24 dental applications. There are 230 positive studies done by 81 universities from 37 different countries showing from 80 to 95% success using Cold Laser Therapy on over 24 different dental procedures.

Cold lasers using the infrared wavelength (from 775 – 905nm, with power densities of 100 – 200mW) are preferred for dental applications because they are capable of penetrating into hard tissue and killing bacteria and infectious matter.

**Studies have shown that these common dental conditions respond positively to LLLT:**

- Alveolitis (bone infection)
- Anesthetic – used alone to replace or in conjunction to enhance the depth or profoundness of dental anesthetic
- Aphthae ulcers (canker sores)
- Bleeding – postoperative bleeding control
- Caries – Used prior to drilling to PREVENT tooth hyperemia and postoperative pain
- Dentitio dificis – pain around the coronal tissue of either primary or permanent teeth
• Endodontics – root canal – used to flush bacteria out of dentinal tubules and reduce pain associated with root canal
• Extraction – used before and after to control bleeding, pain, and speed healing
• Gingivitis (bleeding of the gums)
• Herpes Zoster (cold sores)
• Hypersensitive dentine – usually at gum line – many over the counter tooth pastes are sold with less benefit than LLLT
• Implantology – reduces inflammation, speeds healing, reduces inflammation, and increases bone growth
• Jaw fractures
• Leukplakia (precancerous tissue)
• Lingua geografica
• Lip wounds
• Mucositis associated with cancer medications
• Nausea – used prior to taking impressions to prevent gagging
• Nerve injury
• Edema (swelling)
• Oral surgery
• Orthodontics
• Pain regardless of the cause
• Pediatric dental treatment
• Periodontics
• Prosthetics – denture sores
• Secondary dentin formation
• TMJ/TMD (temporomandibular joint and associated muscle disorders)
SWL TESTIMONIALS

• I have been using the SW laser for about a month. I have lost weight and the swelling in my left leg has gone down and circulation increased. I have more energy and awareness. Also experienced pain relief in my hips. I feel very relaxed after I use the laser. Thank you!
  – Irving G.

• I am getting younger! I heard about the unwinding process and began to do it daily. Within about 6 weeks people began to say, "have you had work done?" (cosmetic surgery) The work was on my thymus (anti-aging gland) appears to have turned back the clock!
  – Cathy S.

• I am an RN who twisted my knee while walking my dog. After several months of trying many things to relieve the pain, I had no relief. Doctors told me that knee replacement was my only option. It was then that I attended a Quantumwave Gathering and had the opportunity to use the laser. During the gathering the pain was so improved that I was able to go dancing that evening. I had a couple of additional sessions the following month. It has been 9 months and the knee pain has not returned.
  – Adele A.

• 1.5 years ago I had an appointment for a facelift but cancelled at the last minute. Something didn't feel right inside. After purchasing the laser I began seeing a remarkable difference in my face. A girlfriend I hadn't seen in several months told me "You look 10 years younger. What are you doing?" She promptly purchased a laser also!
  – Karen W.

Call 12 Year Laser Specialist Kalon Prensky for a FREE Consultation: 1–808–870–0348
The Scalar Wave Laser is commonly used on animals as well as humans. It is popular for use on horses, dogs and cats. The main benefits to animals are that the Scalar Wave Laser:

* Reduces inflammation
* Relieves pain
* Regenerates tissue
* Promotes circulation
* Supports natural, non-invasive, pain free healing

What sets this cold laser apart from any other laser is it's ability to unwind and clear cell memory. As with all therapies, veterinary permission should always be sought before treating any animal.

There are hundreds of research papers from academic sources to back the beneficial therapeutic effects of cold laser therapy for use with animals. It has been used with competition horse training and recovery for over 30 years. It works well for race–horses, show jumpers, show horses, endurance horses, carriage horses, quarter horses, old retired horses, ponies, show dogs and greyhounds.

Using the laser on wounds and muscle tissue speeds up the body's own natural healing process several times over. This helps to prevent unsightly scar tissue and the white hairs you so often see on old scar sites. The treatment only takes
a short time, can be done frequently and has no known side effects, allowing your horse, dog or cat to return to health quickly.

Low level lasers have proven to be beneficial and aid the following conditions in horses, dogs, cats & most animals.

* **General.** Stress/distress, muscle pain, trauma, swellings, joint pain & arthritis, stiffness.
* **Wounds.** Deep cuts, proud flesh, scars, swellings, bruising, oedema, lumps.
* **Operation sites.** Over stitches, staples, pins, pain relief, faster wound healing, less scarring.
* **Back.** Pain, cold back, sore back, arthritis, bruises, strains, fibrotic myopathies, muscle pain, kissing spine.
* **Hip trouble.** Sacroiliac symptom.
* **Skin.** Acute infections, chronic infections, eczema, sunburn, cracked heels, mud fever, rain scold, hematomas, non-healing ulcers.
* **Legs.** Tendon injuries, tendonitis, bowed tendons, ligament injuries, inflammation, adhesions, torn fibers, strains, splints, arthritis, Spavins, ringbone, bruising, sore shins.
* **Feet.** Navicular, cracks & splits, laminitis, bruised soles, over-reach wounds, abscess, thrush.
* **Head.** Sinuses, laryngeal paralysis, congested tear ducts, tooth abscess, sore gums & cheeks.
Horses, Dogs and Cats all Love the Scalar Wave Laser. They relax, breath more fully and respond quickly with pain relief, more energy, happiness and playfulness.

AGRICULTURAL USES

Observations show that the laser light will cause seeds to sprout faster. Even wilted flowers find new life.
INVEST IN YOURSELF

Currently there are 3 OPTIONAL Pulsar Laser Probes available:

• 780 nm Infrared 100mW Call for best PRICE:
  For Pain, Musculoskeletal System, Hard Tissue, Bones, Teeth, Tendons, Ligaments, Smoking Cessation and Weight Control

• 650 nm Red 100mW Call for best PRICE: For Pain, Inflammation, Gums, Scars, Wounds, Burns, Skin, Wrinkles, Acne, Soft Tissues, and Facial Rejuvenation

• 405 nm Violet 100mW Call for best PRICE:
  For Anti-Aging, Pain Relief, Acne, Wrinkles, muscles, and nerves. The 405 nm Violet carries more information than all the other wavelengths and works at most depths. Research shows that violet laser supports pain relief, fighting bacteria & infections and the healing of skin lesions. There is no comparison. This SWL violet probe gives more power, more frequency setting and more value, period!

Each Pulsar Probe is fully programmable with the user-friendly, all digital, membrane touch-pad interface of the Scalar Wave Laser. Each probe contains proprietary super violet crystal technology and is scalar wave enhanced. See extensive testimonials on our website.
